## **Oilseeds and Products**

### **Annual**

### **2003**

Approved by:

**Philip A. Letarte**

**U.S. Embassy**

Prepared by:

Yvan Polet/Morgan A. Perkins

---

#### **Report Highlights:**

**Total oilseed meal consumption decreased as a result of shrinking pig herds and an avian influenza outbreak in 2003. However, that consumption is expected to rebound slightly in the coming year. Poultry farms will be allowed to restock in autumn 2003, while pig herds continue to decrease.**

## **Belgian oilseed production**

Oilseed production in Belgium/Luxembourg is limited to small amounts of rapeseed and linseed.

In 2003, rapeseed is forecast to be grown on 5,500 Ha., of which 2,500 Ha. will be for food and 3,000 Ha. on set aside land. Linseed is grown on 17,000 Ha. for flax fiber.

## **Soybean**

The ongoing reduction of Belgium's pig herd has led to reduced soybean meal use and reduced soybean meal imports in MY 2002/2003. This trend is expected to continue along with further decreases in the pig herd. However, increased soybean meal exports to Eastern Europe are expected to partially offset this decrease in domestic consumption. Soybean oil remains the most important vegetable oil for feed and other industrial and food use. However, price increases are expected to result in some substitution of palm for soybean oil in 2002/03. It is not clear whether palm oil prices will support continuation of this trend in 2004, or whether a bumper 2003 soybean crop will lead to lower soybean oil prices.

Imports of raw beans, however, are expected to continue modest increases in 2003/04 (from 1.6 mmt in 01/02 to 1.7 mmt in subsequent years) thanks to continued increase in processing capacity and exports of locally crushed meal. Local crushing capacity has increased along with soybean toasting capacity (to 300 thousand tons), and industry contacts report favorable condition for continued, slow, growth in crush.

## **Rapeseed**

Preliminary rapeseed crush figures in MY 2002/2003 are up marginally (to 490 TMT) after falling to 460 thousand tons in MY 2001/2002. The rebound is slower than expected because of better margins for soybean crush and reduced rapeseed availability. Rapeseed crush is forecast stable through 2004. Rapeseed oil had become the most important vegetable oil for food because of the GMO issue with soybean oil. In 2003, cheaper palm oil is taking market share from rapeseed oil too, but if this will last in 2004 depends on the rapeseed oil price evolution. EU biofuel legislation is likely to induce an increasing rapeseed oil demand for biodiesel in the coming years.

## **Sunflower**

After local sunflower crush ended in 2001, expectations were that Belgian consumption of sunflower meal and sunflower oil would decrease. Sunflower meal imports have fallen, but sunflower oil consumption is up slightly. In 2003/04, however, increasing sunflower oil prices are expected to lead to a fall in consumption.

## **Palm**

Preliminary figures for 2003 show a significant increase in palm oil imports that will offset decreases in both soybean and rapeseed oil consumption. Palm kernel oil imports increased in 2002 but will decrease in 2003. Palm meal imports for feed are expected to rebound after a decline in early 2003.

## Other

### *Peanuts*

Both peanut imports and exports increased sharply in 2002, but early statistics for 2003 indicate substantially reduced trade. Peanut meal imports and use have decreased and are expected to fall further due to difficulty meeting aflatoxin requirements. New legislation on feed ingredients will no longer allow mixing of shipments in order to stay beneath accepted contamination levels.

### *Cotton seeds*

Imports of cotton meal became significant in 2002 but were mostly re-exported. Expectations are that this trade will stabilize in 2003.

### *Copra*

Copra imports for food use remain stable at 20 thousand tons. Copra meal imports are expected to decrease in 2003. Coconut oil imports and consumption are increasing slightly to substitute for palm kernel oil.

### *Olive oil*

Consumption of olive oil in food is increasing, and expected to reach 15 thousand tons in 2003. Promotion of the health benefits of olive oil are likely to induce further increases of olive oil.

### *Fishmeal*

Use of fishmeal for feed decreased dramatically in past years and stopped in 2002.
